OMRON

Digital Counter
H7CZ

Easy to Use and Easy to Read.

Basic Features
- Character height of 10 mm for better readability.
- Operation is simplified by the Up Key for each digit.

Safety and Reliability
- Power supply circuit and input circuits are isolated inside the Counter.
- Set value limit function prevents unexpected operation of output devices caused by setting mistakes.
- Output counter function helps in managing the service life of the Counter or the load.

Other Features
- Waterproof, dust-proof structure (UL508 Type 4X and IP66).
- Key protection.

⚠ **Refer to *Safety Precautions* on page 17.**

NEW

Features

Basic Features
Better Readability
Character Height of 10 mm with a Wide Viewing Angle.

10 mm (actual size)

Clear Confirmation

Easy to read from the top, bottom, and sides.

The Easiest Operation
Operation is simplified by the Up Key for each digit.

Safety and Reliability
Isolated Power Supply and Input Circuits
Power supply circuit and input circuits are isolated inside the Counter. Previous non-isolated counters had wiring restrictions and could be damaged if wired incorrectly. The H7CZ removes these worries.
Note: Except 12 to 24-VDC models.

Set Value Limit
You can set an upper limit for the set value to prevent unexpected operation of output devices caused by setting mistakes.

Setting the upper limit of the set value enables worry-free operation.

For 1,000 pieces

No overflow
Output Counter
The output counter counts the number of times the output turns ON (alarms can be displayed and the count can be monitored in increments of 1,000 operations). This counter is useful in managing the service life of the Counter or the load.

Other Features
Waterproof, Dust-proof Structure (UL508 Type 4X and IP66)
Worry-free application is possible in locations subject to water.
Note: When the Y92S-29 Waterproof Packing is used.

Key Protection
Select from any of seven protection patterns. Use the best one for the application.

Specifications

Ratings

Item	Models	H7CZ-L8	H7CZ-L8D1
Configuration		1-stage preset counter	
Ratings	Power supply voltage *1	100 to 240 VAC, 50/60 Hz	24 VAC, 50/60 Hz or 12 to 24 VDC
	Operating voltage fluctuation range	85% to 110% of rated supply voltage (12 to 24 VDC: 90% to 110%)	
	Power consumption	Approx. 9.4 VA at 100 to 240 VAC, Approx. 7.2 VA/4.7 W at 24 VAC/12 to 24 VDC, Approx. 3.7 W at 12 to 24 VDC	
Mounting method		Flush mounting or surface mounting	
External connections		8-pin socket	
Degree of protection		IEC IP66, UL508 Type 4X (indoors) for panel surface only and only when Y92S-29 Waterproof Packing is used.	
Input signals		Count, Reset	
Counter	Maximum counting speed	30 Hz or 5 kHz (switchable) (ON/OFF ratio 1:1) *2	
	Input mode	Increment, Decrement	
	Output mode	N, F, C, R, K-1, P, and Q.	
	One-shot output time	0.01 to 99.99 s	
	Reset system	External (minimum reset signal width: 1 ms or 20 ms, selectable), Manual, and Automatic reset (internal according to C, R, P, and Q mode operation)	
Prescaling function		Yes (0.001 to 99.999)	
Decimal point adjustment		Yes (rightmost 3 digits)	
Sensor waiting time		290 ms max. (Control output is turned OFF and no input is accepted during sensor waiting time.)	
Input method		No-voltage inputs: ON impedance: 1 kΩ max. (Leakage current: 12 mA at 0 Ω) ON residual voltage: 3 V max. OFF impedance: 100 kΩ min.	
Control output		3 A at 250 VAC/30 VDC, resistive load (cosφ=1), Minimum applied load: 10 mA at 5 VDC (failure level: P, reference value)	
Display *3		LCD Character height Count value: 10 mm Set value: 6 mm	
Digits		6 digits −99999 to 999999 (−5 digits to +6 digits)	
Memory backup		EEPROM (overwrites: 100,000 times min.) that can store data for 10 years min.	
Operating temperature range		−10 to 55°C (−10 to 50°C if Counters are mounted side by side) (with no icing or condensation)	
Storage temperature range		−25 to 70°C (with no icing or condensation)	
Operating humidity range		25% to 85%	
Front panel color		Light gray (5Y7/1)	

*1. Do not use the output from an inverter as the power supply. The ripple must be 20% maximum for DC power.
2. A response of 10 kHz is possible if the response speed is 5 kHz and the 1-stage preset counter input mode is increment or decrement.
*3. The display is lit only when the power is ON. Nothing is displayed when power is OFF.

Characteristics

Insulation resistance	100 MΩ min. (at 500 VDC) between current-carrying terminals and exposed non-current-carrying metal parts, and between non-continuous contacts	
Dielectric strength	2,000 VAC, 50/60 Hz for 1 min between current-carrying metal parts and non-current-carrying metal parts 2,000 VAC, 50/60 Hz for 1 min between power supply and input circuit (1,000 VAC for 24 VAC/12 to 24 VDC) 1,000 VAC, 50/60 Hz for 1 min between control output, power supply, and input circuit (2,000 VAC) 1,000 VAC, 50/60 Hz for 1 min between non-continuous contacts	
Impulse withstand voltage	3.0 kV between power terminals (1.0 kV for models with 24 VAC/12 to 24 VDC) 4.5 kV between current-carrying terminals and exposed non-current-carrying metal parts (1.5 kV for models with 24 VAC/12 to 24 VDC)	
Noise immunity	±1.5 kV between power terminals ±600 V between input terminals Square-wave noise by noise simulator (pulse width: 100 ns/1 μs, 1-ns rise)	
Static immunity	Malfunction: 8 kV Destruction: 15 kV	
Vibration resistance	Destruction	10 to 55 Hz with 0.75-mm single amplitude each in three directions for 2 h each
	Malfunction	10 to 55 Hz with 0.35-mm single amplitude each in three directions for 10 min each
Shock resistance	Destruction	300 m/s^2 each in three directions
	Malfunction	100 m/s^2 each in three directions
Life expectancy	Mechanical: 10,000,000 operations min. Electrical: 100,000 operations min. (3 A at 250 VAC, resistive load, ambient temperature condition: 23°C)*	
Weight	Approx. 100 g (Counter only)	

* Refer to the Life-test Curve.

Applicable Standards

Approved safety standards	cULus (or cURus): UL508/CSA C22.2 No. 14* EN 61010-1 (IEC 61010-1): Pollution degree 2/overvoltage category II B300 PILOT DUTY 1/4 HP 120 VAC, 1/3 HP, 240 VAC, 3 A resistive load VDE0106/P100 (finger protection)

	                                     8 kV air discharge
	Immunity RF-interference: EN 61000-4-3: 10 V/m (Amplitude-modulated, 80 MHz to 1 GHz);
	                                     10 V/m (Pulse-modulated, 900 MHz ±5 MHz)
	Immunity Conducted Disturbance: EN 61000-4-6: 10 V (0.15 to 80 MHz)
	Immunity Burst: EN 61000-4-4: 2 kV power-line;
	                                     1 kV I/O signal-line
	Immunity Surge: EN 61000-4-5: 1 kV line to lines (power and output lines);
	                                     2 kV line to ground (power and output lines)
	Immunity Voltage Dip/Interruption: EN 61000-4-11: 0.5 cycle, 100% (rated voltage)

* The following safety standards apply to H7CZ.
  cUL (Listing): Applicable when an OMRON P2CF(-E) Socket is used.
  cUR (Recognition): Applicable when any other socket is used.

Life-test Curve (Reference Values)

Resistive load

Inductive load

A current of 0.15 A max. can be switched at 125 VDC (cosφ=1) and current of 0.1 A max. can be switched if L/R=7 ms. In both cases, a life of 100,000 operations can be expected.

I/O Functions

Using as a Counter *1

|		
Inputs	Count	• Reads counting signals. • Increment and decrement inputs accepted.
	Reset	• Resets present value and outputs.*2 • Counting cannot be performed during reset input. • Reset indicator is lit while reset input is ON.
Outputs	OUT	Outputs signals according to the specified output mode when a set value is reached.

*1. For information on operation of I/O functions, refer to page 14 and page 15.
*2. In elapsed time mode, the present value returns to 0; in remaining time mode, the present value returns to the set value.

• The following table shows the delay from when the reset signal is input until the output is turned OFF. (Reference values)
Minimum reset signal width	Output delay time
1 ms	0.8 to 1.2 ms
20 ms	15 to 25 ms

Connections

Block Diagram

**Note:** All models except for H7CZ-L8D1 have basic insulation.

Terminal Arrangement

Confirm that the power supply meets specifications before use.

H7CZ-L8/L8D1

1-stage Contact Output

## Input Connections

The inputs of the H7CZ-L8□ are no-voltage (short-circuit or open) inputs.
No-voltage Inputs (NPN Inputs)

**Open Collector**

Note: Operates with transistor ON.

Voltage Output

Note: Operates with transistor ON.

Contact Input

Note: Operates with relay ON.

DC Two-wire Sensor

Note: Operates with transistor ON.

No-voltage Input Signal Levels

No-contact input	Short-circuit level (transistor ON) • Residual voltage: 3 V max. • Impedance when ON: 1 kΩ max. (The leakage current is approx. 12 mA when the impedance is 0 Ω.)
	Open level (transistor OFF) • Impedance when OFF: 100 kΩ min.
Contact input	Use contacts which can adequately switch 5 mA at 10 V.

Note: The DC voltage must be 30 VDC max.

Input Circuits
Count and Reset Input

No-voltage Inputs (NPN Inputs)

Applicable Two-wire Sensor

• Leakage current: 1.5 mA max.
• Switching capacity: 5 mA min.
• Residual voltage: 3 VDC max.
• Operating voltage: 10 VDC

Protecting the Counter in Environments Subject to Oil

The H7CZ's panel surface is water-resistive (conforming to IP□6, UL Type 4X) and so even if drops of water penetrate the gaps between the keys, there will be no adverse effect on internal circuits. If, however, there is a possibility of oil being present on the operator's hands, use the Soft Cover. The Soft Cover ensures protection equivalent to IP54F against oil. Do not, however, use the H7CZ in locations where it would come in direct contact with oil.

Flush Mounting Adapter
Y92F-30

Order the Flush Mounting Adapter with the following model number separately if it is lost or damaged.

Note: The Waterproof Packing is included with models with screw terminals.
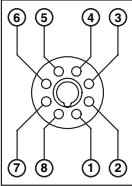

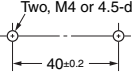

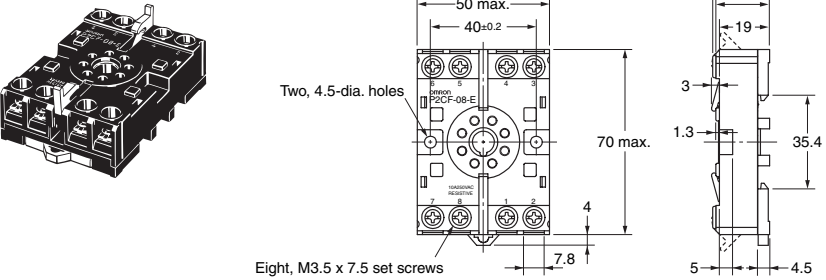

**Y92F-45**

Use this Adapter to install the Counter in a cutout previously made for a DIN 72 × 72 mm device (panel cutout: 68 × 68 mm).

## Waterproof Packing
Y92S-29

Note: The Waterproof Packing is included with models with screw terminals.

Order the Waterproof Packing separately if it is lost or damaged. The Waterproof Packing can be used to achieve IP66 protection.

The Waterproof Packing will deteriorate, harden, and shrink depending on the application environment. To ensure maintaining the IP□6, UL Type 4X waterproof level, periodically replace the Waterproof Packing. The periodic replacement period will depend on the application environment. You must confirm the proper replacement period. Use 1 year or less as a guideline. If the Waterproof Packing is not replaced periodically, the waterproof level will not be maintained. It is not necessary to mount the Waterproof Packing if waterproof construction is not required.

[MODE]

on-C 0 — Output ON count monitor value

Note: The monitor value is only displayed. It cannot be set.

Explanation of Functions

Input Mode (ℂnℾm)
Set increment mode (UP) or decrement mode (DOWN) as the input mode.

Output Mode (ō∐ℾm)
Set the way that control output for the present value is output. The possible settings are N, F, C, R, K-1, P, Q, and A.

One-shot Output Time (ōℾℾm)
Set the one-shot output time (0.01 to 99.99 s) for control output. One-shot output can be used only when C, R, K-1, P, Q, or A is selected as the output mode.

Counting Speed (ℂnℾ5)
Set the maximum counting speed (30 Hz/5 kHz) for count inputs.

Reset Input Signal Width (ℂℱLℾ)
Set the reset input signal width (20 ms/1 ms) for reset inputs.
If contacts are used for the input signal, set the input signal width to 20 ms. Processing to eliminate chattering is performed for this setting.

Decimal Point Position (dℙ)
Decide the decimal point position for the present value.

Prescale Value (ℙ5ℂL)
Pulses input to the counter are converted according to the specified prescale value.
(Setting range: 0.001 to 99.999 for 6-digit models.)
Example: To display the feed distance for systems that output 25 pulses for a feed length of 0.5 m in the form □□.□□ m:
1. Set the decimal point position to 2 decimal places.
2. Set the prescale value to 0.02 (0.5 ÷ 25).
- Observe the following points when setting a prescale value.
  Set the set value to a value less than {Maximum countable value − Prescale value}.
  Example: If the prescale value is 1.25 and the counting range is 0.000 to 999.999, set the set value to a value less than 998.749 (= 999.999 − 1.25).
  If the set value is set to a value greater than this, output will not turn ON.
- Output will turn ON, however, if a present value overflow occurs (FFFFFF).

Note: If the prescale value setting is incorrect, a counting error will occur. Check that the settings are correct before using this function.

Set Value Upper Limit (5L-H)
Set the upper limit for the set value when it is set in run mode.
The setting can be made from 1 to 999999 for 6-digit models.

Key Protect Level (ⱪℽℙℾ)
Set the key protect level.
Refer to *Key Protect Level* on page 16.

Output ON Count Alarm Set Value (ōn-A)
Set the alarm value for the output ON count.
The limit can be set to between 0 × 1000 (0 times) and 9999 × 1000 (9,999,000 times). Only the underlined values are set. The alarm will be disabled if 0 is set.
If the total ON count of the output exceeds the alarm set value, E3 will be displayed on the Timer to indicate that the output ON count alarm value was exceeded. Refer to *Self-diagnostic Function* on page 16 for information on the E3 display.

Output ON Count Monitor Value (ōn-ℂ)
The monitor value is only displayed. It cannot be set.
The output ON count will be 1,000 times the displayed value.

Operation in Run Mode

• Set values for each digit as required using the ⌃ Key.

$$0 \leftrightarrow 1 \leftrightarrow 2 \leftrightarrow 3 \leftrightarrow 4 \leftrightarrow 5 \leftrightarrow 6 \leftrightarrow 7 \leftrightarrow 8 \leftrightarrow 9$$

1-stage Preset Counter

Present value
Set value

• **Present Value**
  Shows the present count value.

• **Set Values**
  Set the set values.
  When the present value reaches the set value, a signal is output according to the specified output mode.

Input Modes and Present Value
I/O Functions for Counter Operation

UP (Increment) Mode	DOWN (Decrement) Mode
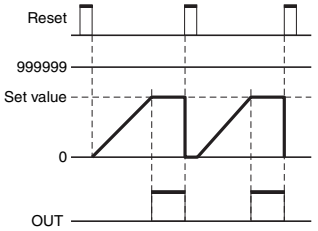

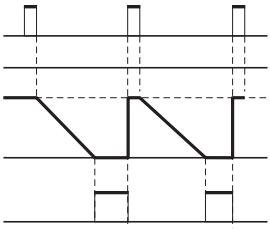

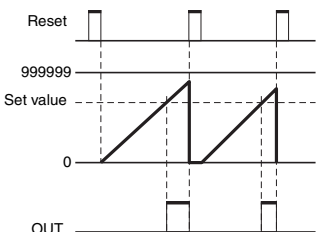

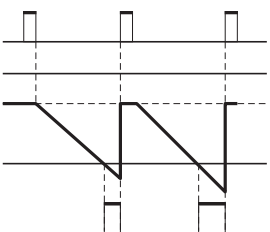

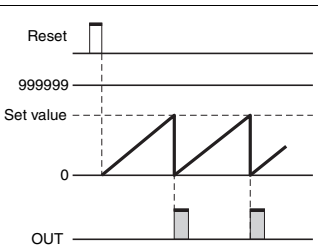

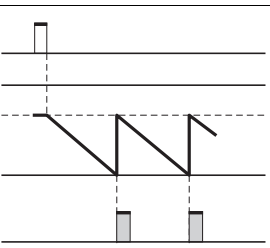

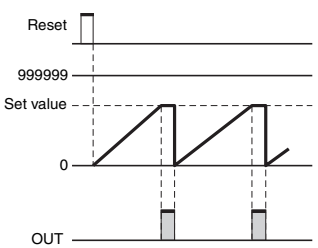

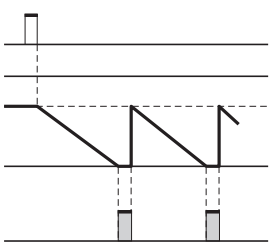

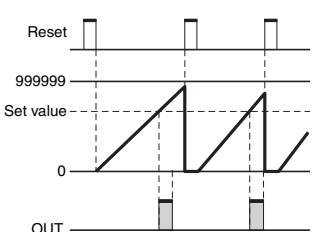

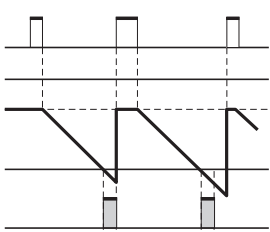

✱ Counting starts when the count input is turned ON after turning ON the power.

Note: 1. The meaning of the H and L symbols in the tables is explained below.

Symbol Input method	No-voltage input (NPN input)	Voltage input (PNP input)
H	Short-circuit	4.5 to 30 VDC
L	Open	0 to 2 VDC

Input/Output Mode Settings

 Self-holding output   One-shot (The one-shot output time can be set in the range 0.01 to 99.99s.)

		Input mode		Operation after count completion
		UP	**DOWN**	
Output mode setting	**N**			The outputs and present value display are held until reset is input.
	F			The present value display continues to increase/decrease. The outputs are held until reset is input.
	C			As soon as the count reaches SV, the present value display returns to the reset start status. The present value display does not show the present value upon count-up. The outputs repeat one-shot operation.
	R			The present value display returns to the reset start status after the one-shot output time. The outputs repeat one-shot operation.
	K-1			The present value display continues to increase/decrease.

(The one-shot output time can be set in the range 0.01 to 99.99s.)

Self-holding output   One-shot

		Input mode		Operation after count completion
		UP	**DOWN**	
Output mode setting	**P**	Reset 999999 Set value 0 OUT	Reset 999999 Set value 0 OUT	The present value display does not change during the one-shot output time period, but the actual count returns to the reset start status. The output will return to one-shot mode. The outputs repeat one-shot operation.
	Q	Reset 999999 Set value 0 OUT	Reset 999999 Set value 0 OUT	The present value continues to increase/decrease for the one-shot output time, but returns to the reset start status after the one-shot output time has elapsed. The outputs repeat one-shot operation.
	A	Reset 999999 Set value 0 OUT	Reset 999999 Set value 0 OUT	The present value display and OUT self-holding output is held until reset is input.

Note: 1. When the present value reaches 999999, it returns to 0.
     2. Counting cannot be performed during reset input.
     3. If reset is input while one-shot output is ON, one-shot output turns OFF.
     4. If there is power failure while output is ON, output will turn ON again when the power supply has recovered.
        For one-shot output, output will turn ON again for the duration of the output time setting once the power supply has recovered.
     5. Do not use the counter function in applications where the count may be completed (again) while one-shot output is ON.
     6. The setting range is 0 to 999,999.

Key Protect Level

It is possible to prevent setting errors by prohibiting the use of certain operation keys by specifying the key protect level (KP-1 to KP-7) when the key-protect switch is set to ON.
The key protect level is set in the function setting mode. The key protect indicator is lit when the key-protect switch is ON.

OFF ✽ ←→ ON
(Disabled) (Enabled)

✽ Factory-set to OFF

Key protect indicator
Level	Description	Details			
		Changing modes*	Switching display during operation	Reset Key	Up/Down Keys
KP-1 (default setting)		Invalid	Valid	Valid	Valid
KP-2		Invalid	Valid	Invalid	Valid
KP-3		Invalid	Valid	Valid	Invalid
KP-4		Invalid	Valid	Invalid	Invalid
KP-5		Invalid	Invalid	Invalid	Invalid
KP-6		Invalid	Invalid	Valid	Valid
KP-7		Invalid	Invalid	Invalid	Valid

✽ Changing mode to configuration selection mode or function setting mode.

Self-diagnostic Function

The following displays will appear if an error occurs.

Main display	Sub-display	Description	Output status	Correction method	Set value after reset
- - - - - ✽1	No change	Present value underflow ✽2	No change	Either press the Reset Key or turn ON reset input.	No change
FFFFF ✽1	No change	Present value overflow	No change	Either press the Reset Key or turn ON reset input.	No change
E1	Not lit	CPU error	OFF	Either press the Reset Key or reset the power supply.	No change
E2	Not lit	Memory error (RAM)	OFF	Turn ON the power again.	No change
E2	Sum	Memory error (EEPROM) ✽3	OFF	Reset Key	Factory setting
E3 ✽4	No change	Output Counter Overflow	No change	Reset Key ✽5	No change

✽1. Display flashes.(1-second cycles)
✽2. This occurs if the present value or total count value falls below −99999.
✽3. This includes times when the life of the EEPROM has expired.
✽4. The normal display and E3 will appear alternately.
  When the Reset Key is pressed, E3 will not be displayed even if the alarm set value is exceeded.
  (Monitoring is possible, however, because the counter will continue without the output ON count being cleared.)
✽5. This is displayed if the alarm value setting for either of the two outputs is exceeded if a model with two outputs is used.The total ON count will not be cleared by using the Reset Key.

Safety Precautions for All H7CZ Series (Common)

⚠ CAUTION

Do not allow pieces of metal, wire clippings, or fine metallic shavings or fillings from installation to enter the product. Doing so may occasionally result in electric shock, fire, or malfunction.

Minor injury due to explosion may occasionally occur. Do not use the Counter where subject to flammable or explosive gas.

Fire may occasionally occur. Tighten the terminal screws to the rated torque.
P2CF Socket terminals: 4.4 lb-in (0.5 N·m)

Minor injury due to electric shock may occasionally occur. Do not touch any of the terminals while power is being supplied. Be sure to mount the terminal cover after wiring.

The life expectancy of the output relay varies considerably according to its usage. Use the output relay within its rated load and electrical life expectancy. If the output relay is used beyond its life expectancy, its contacts may become fused or there may be a risk of fire. Also, be sure that the load current does not exceed the rated load current and when using a heater, be sure to use a thermal switch in the load circuit.

Minor electric shock, fire, or malfunction may occasionally occur. Do not disassemble, modify, or repair the Counter or touch internal components.

Precautions for Safe Use

- The panel surface of the H7CZ is water-resistant (conforming to NEMA4, IP66, UL Type 4X (Indoor Use Only). To protect the internal circuits from water penetration through the space between the H7CZ and operating panel, waterproof packing is included. Attach the Y92F-30 Adapter with sufficient pressure with the reinforcing screws so that water does not penetrate the panel.

0.5 to 1 mm
It is recommended that the space between the screw head and the Adapter be 0.5 to 1 mm.
- When mounting the Counter to a panel, tighten the two mounting screws alternately, a little at a time, so as to keep them at an equal tightness. If the panel screws are tightened unequally, water may enter the panel.
- Store the Counter at the specified temperature. If the Counter has been stored at a temperature of less than
  −10°C, allow the Counter to stand at room temperature for at least 3 hours before use.
- Mounting the Counter side-by-side may reduce the life expectancies of internal components.
- Use the Counter within the specified ranges for the ambient operating temperature and humidity.
- Do not use in the following locations:
  - Locations subject to sudden or extreme changes in temperature.
  - Locations where high humidity may result in condensation.
- Do not use the Counter outside of the rated ranges for vibration, shock, water exposure, and oil exposure.
- Do not use this Counter in dusty environments, in locations where corrosive gasses are present, or in locations subject to direct sunlight.
- Install the Counter well away from any sources of static electricity, such as pipes transporting molding materials, powders, or liquids.

- Internal elements may be destroyed if a voltage outside the rated voltage range is applied.
- Be sure that polarity is correct when wiring the terminals.
- Separate the Counter from sources of noise, such as devices with input signals from power lines carrying noise, and wiring for I/O signals.
- Do not connect more than two crimp terminals to the same terminal.
- Up to two wires of the same size and type can be inserted into a single terminals.
- Use the specified wires for wiring. Applicable Wires: AWG 18 to AWG 22, solid or twisted, copper
- Install a switch or circuit breaker that allows the operator to immediately turn OFF the power, and label it to clearly indicate its function.
- Approximately 14 V is output from the input terminals. Use a sensor that contains a diode.
- Use a switch, relay, or other contact so that the rated power supply voltage will be reached within 0.1 seconds. If the power supply voltage is not reached quickly enough, the Counter may malfunction or outputs may be unstable.
- Use a switch, relay, or other contact to turn the power supply OFF instantaneously. Outputs may malfunction and memory errors may occur if the power supply voltage is decreased gradually.
- When changing the set value during operation, because the H7CZ uses a constant read-in system, output will turn ON if the set value is equal to the present value.
- When changing the comparison value during operation, because the H7CZ uses a constant read-in system, the output status will change if the comparison value is changed to a value on the other side of the present value.
- Do not use organic solvents (such as paint thinners or benzine), strong alkali, or strong acids. They will damage the external finish.
- Confirm that indications are working normally, including the LCD. The indicator, LCD, and resin parts may deteriorate more quickly depending on the application environment, preventing normal indications. Periodic inspection and replacement are required.
- The waterproof packing may deteriorate, shrink, or harden depending on the application environment. Periodic inspection and replacement are required.

H7CZ

Precautions for Correct Use

- H7CZ models with a 12 to 24-VDC power supply use a transformer-free power supply method in which the power supply terminals are not isolated from the signal input terminals. If a non-isolating DC power supply is used, unwanted current paths may occasionally burn or destroy internal components depending on the wiring. Always check the wiring sufficiently before use.
- An inrush current of approx. 10 A will flow for a short time when the power supply is turned ON. If the capacity of the power supply is not sufficient, the Counter may not start. Be sure to use a power supply with sufficient capacity.
- Maintain voltage fluctuations in the power supply within the specified operating voltage range.
- When turning the power ON and OFF, input signal reception is possible, unstable, or impossible as shown in the diagram below.
- Inrush current generated by turning ON or OFF the power supply may deteriorate contacts on the power supply circuit. Turn ON or OFF to a device with the rated current of more than 10 A.
- If the prescale value setting is incorrect, a counting error will occur. Check that the settings are correct before using this function.
- Make sure that all settings are appropriate for the application. Unexpected operation resulting in property damage or accidents may occur if the settings are not appropriate.
- Do not leave the Counter for long periods at a high temperature with output current in the ON state. Doing so may result in the premature deterioration of internal components (e.g., electrolytic capacitors).
- EEPROM is used as backup memory when the power is interrupted. The write life of the EEPROM is 100,000 writes. The EEPROM is written at the following times:
  - When the power supply is turned OFF
  - When switching from Configuration Selection Mode or Function Setting Mode to Run Mode
- Dispose of the product according to local ordinances as they apply.

Conformance to EN/IEC Standards

- When conforming to EMC standards, refer to the information provided in this datasheet for cable selection and other conditions.
- This is a class A product. In residential areas it may cause radio interference, in which case the user may be required to take adequate measures to reduce interference.
- Basic insulation is provided between power supply and input terminals, between power supply and output terminals, and between input and output terminals. (However, no insulation is provided between the power supply and input terminals for the H7CZ-L8D1.)
- When double insulation or reinforced insulation is required, apply double insulation or reinforced insulation as defined in IEC 60664 that is suitable for the maximum operating voltage with clearances or solid insulation.
- Connect the input and output terminals to devices that do not have any exposed charged parts.
