**OMRON**

IO-Link makes communication down to the sensor level visible

IO-Link

Digitalize manufacturing sites to realize Onsite IoT

The manufacturing industry is under pressure to meet the demands of flexible production and advanced manufacturing. Manufacturers are now approaching future manufacturing innovation by easily and reliably collecting a wide range of data from the production floor and leveraging digital technologies, such as ICT and analysis technology. 'Onsite IoT' uses production floor data to help minimize machine downtime and backtracking and increase machine operation stability and productivity. Offering a wide variety of components including sensors and controllers and further expanding the IoT product lineup to collect onsite data, OMRON can totally help you bring IoT innovation to your manufacturing sites.
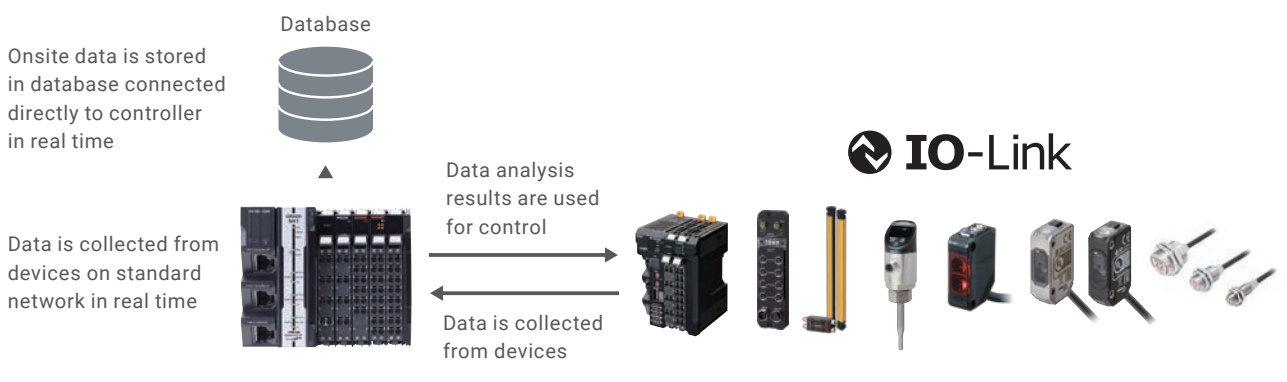

Visualization of production floor

Digitalization of manufacturing sites

Predictive monitoring
Monitor machine abnormalities using data

Quality improvement
Eliminate defects using data

Manufacturing traceability
Accumulate processing and inspection data for item-level data management

Onsite IoT brings innovation to manufacturing

Real-time onsite data collection, analysis, and utilization

The controller collects data from the manufacturing site (e.g., status monitoring data, production data, and inspection data) in real time while controlling devices. Collected data is accumulated, analyzed, and utilized for various applications such as predictive monitoring of machines, manufacturing traceability, predictive maintenance, and quality improvement.

Database

Onsite data is stored in database connected directly to controller in real time

Data analysis results are used for control

IO-Link

Data is collected from devices on standard network in real time
Data is collected from devices

Digitalize your machine with IO-Link

Replace I/O units with IO-Link masters and install IO-Link sensors and actuators to introduce IO-Link into your production system.In order to bring IoT to a factory, data is collected from various components installed on the production floor via standard networks including IO-Link.

OMRON makes it easy to introduce IO-Link components

OMRON's wide range of IoT products, from sensors to controllers, allows flexible system configuration and easy IoT system design, commissioning, and maintenance. As a PLC manufacturer, OMRON also offers various IO-Link masters and components with useful features, facilitating introduction of an IO-Link system.

Flexible system configuration

You can connect IO-Link sensors and actuators in many different ways to suit your application. The IO-Link master can also be connected to standard sensors. This means you can use IO-Link sensors in your existing system.

Speed up design, commissioning, and maintenance

The intuitive operation simplifies configuration and programming, and the configuration software (integrated development environment Sysmac Studio) provides many useful functions. This reduces setup and commissioning time of IO-Link systems.

Reduce configuration time with automatic parameter setting and automatic device variable generation

Just select and place a device on the Sysmac Studio to automatically set all parameters at once and automatically generate device variables on the I/O map. It is possible to reduce configuration time by 90% and minimize configuration mistakes.

Select and place an IO-Link device just by dragging and dropping it on the Sysmac Studio
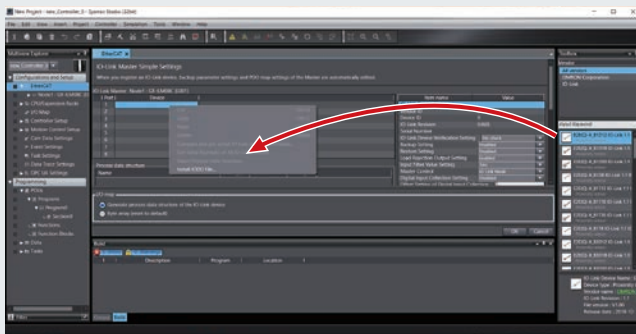

No need to enter related setting parameters
Automatic update

No need to program
Automatic generation of device variables according to process data

Reduced time by 90%[*1]

*1. Comparison with previous OMRON products

Minimize commissioning and replacement time

Setting all devices from the controller significantly reduces setup time.

Other vendor Data transfer to each device using special software

Configuring each device one by one using special software requires time and effort.

OMRON Data transfer to all devices at once from the controller

IO-Link device setting data

Configuring all devices at once from the controller eliminates the need to configure each device individually, greatly cutting down setup time and effort.

IO-Link: a communication technology reaching the sensors level

IO-Link, specified as international standard IEC 61131-9, is an open information technology (interface technology) between the sensor or actuator and the I/O terminal. It collects information from the sensor or actuator, which allows you to accurately monitor the status of the manufacturing site. IO-Link enables communication within the whole system and reduces time required for commissioning and maintenance.

An open international standard

As of November 2019, over 260 companies, including major sensor manufacturers, have joined the IO-Link Consortium. A system can be built with devices from OMRON and other vendors.
For the latest information, visit https://io-link.com/en/

Third party compatibility

All IO-Link sensors have an IODD (Input Output Data Description) file that lists the component type and what parameters need to be set.
IODD files are a global standard, so IO-Link components can be used interchangeably with any IO-Link manufacturer.

Controller

IODD

IODD

Company A

Company B

Information beyond ON and OFF

IO-Link sends and receives not only ON/OFF signals, but also sensor information.
Three baud rates (COM1: 4.8 kbps, COM2: 38.4 kbps, COM3: 230.4 kbps) are possible in IO-Link specifications. OMRON's IO-Link components are compatible with COM2 and COM3, and are capable of high speed communications.

Status monitoring and batch setting

The IO-Link master has multiple ports, and an IO-Link sensor is connected to each port.
Unlike a fieldbus network, communication is point-to-point.

Predictive monitoring
and quick recovery boost uptime

Machine condition monitoring using data collected from various devices allows you to take proactive actions, reducing unplanned stops. When an error is detected, detailed information is provided promptly. This helps minimize downtime.

Problem

The location of the target object changes over time due to deterioration of the mechanism, resulting in sudden stops.
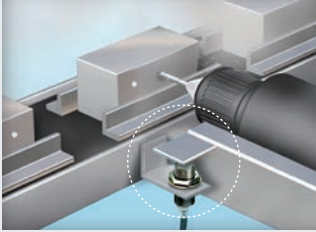

Problem

Dirt on the sensing surface blocks sensor beam, resulting in sudden stops.

Problem

When the machine stops, it is difficult to identify the cause.

Provides early warning if the target distance is changing, preventing a problem from occurring

Solve a problem before the machine stops.

Detection Level

Proximity sensor

Constantly monitoring the position of the target object and reporting excessive remoteness or proximity are useful for predictive maintenance.

Provides early warning if the light intensity drops, preventing false detection

Solve a problem before the machine stops.

Incident Light Level

Light curtain, photoelectric sensor

Light intensity drop due to dirt accumulated on the light curtain is reported. You can do predictive maintenance by taking action before false detection occurs.

Reports fault location and condition, minimizing downtime

Quickly restore the machine even if it stops.

Display of error location

Display of detail error information

Light curtain, photoelectric sensor, proximity sensor, flow sensor

When a fault occurs, IO-Link allows you to see which sensor faulted and the possible cause of the error. With this information, you can determine the required action and quickly bring the equipment back online.

Visualization of various data improves manufacturing quality

A variety of quality-related data can be visualized. Signs of failure can be identified to take proactive action before failure affects quality, reducing Quality Loss.
Problem

The flow rate of cooling water is monitored, but water temperature change is not observed.
This results in inconsistent quality.

Problem

When oil temperature rises, viscosity also rises and hydraulic pressure drops. This reduces pressing quality.

Monitors multiple sets of process data to ensure strength of parts

Increase accuracy by monitoring multiple sets of data.

[Example of carburizing furnace]

The flow rate and temperature of cooling water are monitored to maintain cooling quality.

Status display

Simultaneously monitoring the pressure and temperature of oil enables pressing conditions to be maintained and controlled. This ensures a consistent finish and raises the standard of pressing quality.

IoT pressure sensor

Reduce design time

Save setup time through intuitive operation without reading manuals and through automatic generation of variables.

Problem

Engineers have to make many settings while reading manuals.

Problem

Manual entry of device variables is required for each sensor.

Problem
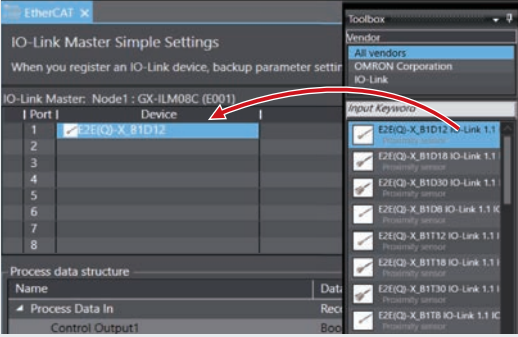

IO-Link has to be configured manually after wiring.

## Just drag and drop devices to configure all necessary devices at once*1

Set parameters with simple operation.

Patent pending | World's first *2
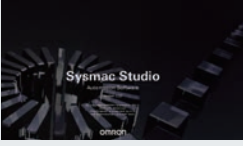

Automatically updates I/O allocation of host communication according to data length (EtherCAT)

You can configure all devices to use just by dragging and dropping them.
This prevents human errors.

Sysmac Studio

Use required data easily*1
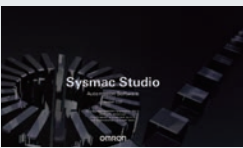

Configure IO-Link devices without time-consuming programming.

Patented

I/O port of sensor
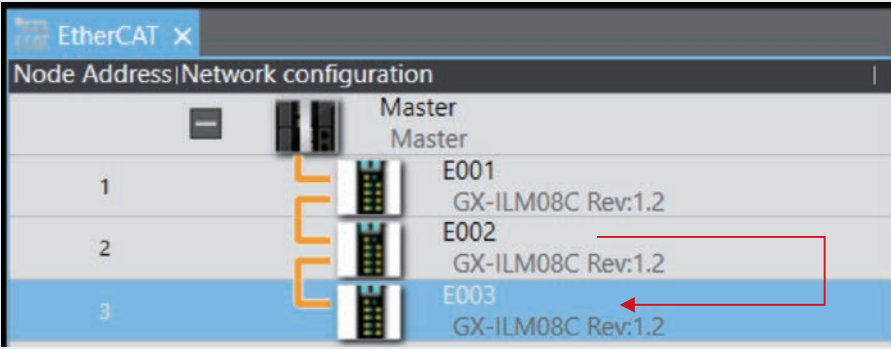

Device variables (variable names) are automatically generated on the I/O map according to process data. You can easily use necessary data on the program.
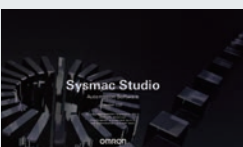

Sysmac Studio

Easily reuse settings by copying and pasting

Make configuration simple and fast.

IO-Link device information can be copied and pasted from a configuration that has already been set up, making reuse easy.

Sysmac Studio

*1. Available via EtherCAT. *2. Based on OMRON investigation in July 2019.

Reduce commissioning and maintenance time

Save setup time through intuitive operation without reading manuals and through automatic generation of variables.

From	Wiring	Setup	I/O check	Replacing/rewiring

To	Wiring	Setup	I/O check	Replacing/rewiring	← Reduced time and effort
Problem

During commissioning or changeover, operators have to perform I/O check for each of the thousands of sensors installed on the line.

Problem
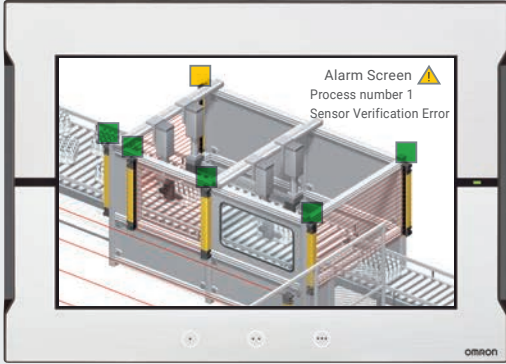

After commissioning, it takes time to identify installation mistakes.

Problem

System improvement and change require time and effort and can cause mistakes, leading to lower operating efficiency.

Detect installation mistakes before commissioning

Reduce time required for checking.

Alarm Screen ⚠
Process number 1
Sensor Verification Error

omron
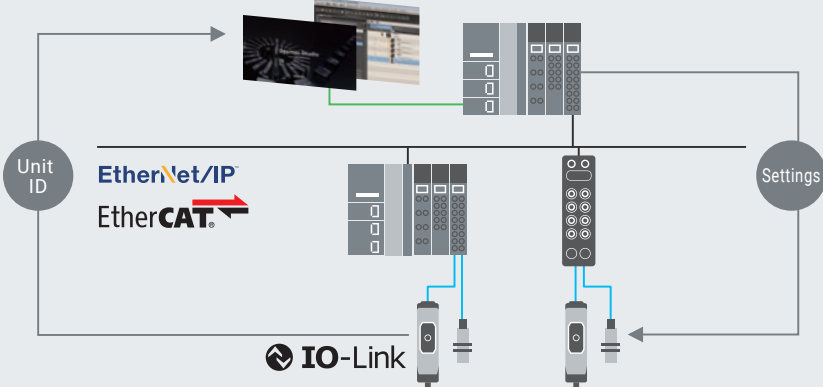

By checking the sensor identification (manufacturer, sensor type, model) on the HMI before commissioning, you can easily detect mistakes such as misconnected or unconnected sensors and installation errors, and can take action immediately. This enables fast commissioning.

IO-Link Sensors

IoT Flow Sensor

E8FC

Detect Signs of Abnormalities in Cooling Water by Simultaneous Measurement of "Flow Rate + Temperature"

- Multi-sensing of "Flow rate + temperature" for preventing a sudden stops or manufacturing defects.
- Various lineup of replacement adapters to enable easy replacement of your current pressure gauges and flow meters.
- Analog current output function in addition to the IO-Link communications function that can perform self-diagnosis of abnormalities in the sensor itself.

Applicable fluid *1	Rated flow rate range (Pipe diameter)	Connection method	IO-Link baud rate	Model
Liquid	0.6 to 14 l/min (10A) 1 to 30 l/min (15A) 1.5 to 60 l/min (20A) 2 to 100 l/min (25A)	M12 Connector (4-pin)	COM2 (38.4kbps) COM3 (230.4kbps)	E8FC-25☐

*1. The applicable fluid is a liquid that does not erode the wetted part materials (for example, water or a fluid whose conductivity is equivalent to that of water).

For details, refer to E8FC/E8PC Series Catalog (No. E472).

IoT Pressure Sensor

E8PC

Detect Signs of Abnormalities in Cooling Water and Hydraulic Oil by Simultaneous Measurement of "Pressure + Temperature"

Overview of IO-Link Compliant Devices

IO-Link Sensors

Welding Proximity Sensor

E2EW Series DC 3-wire

Stable detection in lines containing both aluminum and iron

- Equivalent sensing distances for both iron and aluminum [1].
- Enables common design for lines with both iron and aluminum [1].
- The exceptional sensing range [2], which means fewer false detections and thereby fewer unexpected stoppages.
- OMRON's unique fluororesin coating technologies enable long-lasting spatter resistance [4], which lasts 60 times [3] loger than previous models.
- Durable full metal body to reduce unexpected stoppages.
- 2-output (NO+NC) models and models with IO-Link are also available.
- The laser printing on the sensor head let you know the sensing distance at glance. [5]
- Equipped with a function, which effectively cancels pulse noise of current magnetic field. [1]
- UL certification (UL60947-5-2) and CSA certification (CSA C22.2 UL60947-5-2-14).

[1]. PREMIUM Models only.
[2]. Based on June 2019 OMRON investigation.
[3]. Comparison with E2EF-Q products. Based on June 2019 OMRON investigation.
[4]. Models with spatter-resistant coating only.
[5]. Models without spatter-resistant coating only.

IO-Link Sensors

Safety Light Curtain / Safety Multi-Light Beam

F3SG-SR/PG

Easy to monitor and ready for IoT

- Conforms to major international standards.
- Environmental resistance and rugged structure for use in any environment (IP67, IP67G [*1]).
- Industry's broadest line-up [*2], from finger protection to body protection.
- Flexible height model for easy integration into machines and lines.
- For diverse applications, from simple protection to data utilization.

*1. IEC 60529/JIS C 0920 Annex 1
*2. Based on OMRON investigation in June 2018.

Safety Light Curtain F3SG-SR
Finger protection (Detection capability: 14-mm dia.)

Number of beams	Protective height (mm)	Advanced Model	Standard Model
15 to 199	160 to 2,000	F3SG-4SRA□□□-14(-F)	F3SG-4SRB□□□-14(-F)

Hand protection (Detection capability: 25-mm dia.)

Number of beams	Protective height (mm)	Advanced Model	Standard Model
8 to 124	160 to 2,480	F3SG-4SRA□□□-25(-F)	F3SG-4SRB□□□-25(-F)

Arm/Leg protection (Detection capability: 45-mm dia.)

Number of beams	Protective height (mm)	Advanced Model	Standard Model
6 to 38	240 to 1,520	F3SG-4SRA□□□-45	F3SG-4SRB□□□-45

Body (Detection capability: 85-mm dia.)

Number of beams	Protective height (mm)	Advanced Model	Standard Model
4 to 12	280 to 920	F3SG-4SRA□□□-85	F3SG-4SRB□□□-85

Note:1. Mounting brackets are not included. Order brackets sold separately.
Note:2. Connection cables are not included with the safety light curtain. Order cables sold separately.

For details, refer to F3SG-SR/PG Series Catalog (No. F105).

Safety Multi-Light Beam F3SG-PG Available soon

Perimeter access guarding (Beam gap: 300 to 500 mm)

Number of beams	Product length (mm)	Advanced Model
2, 3 and 4	670 to 1,370	F3SG-4PGA□□□□-□A

Perimeter guarding long range (Beam gap: 300 to 500 mm)

Number of beams	Product length (mm)	Advanced Model
2, 3 and 4	670 to 1,370	F3SG-4PGA□□□□-□L

Perimeter guarding passive mirror (Beam gap: 300 to 500 mm)

Number of beams	Product length (mm)	Advanced Model
2, 3 and 4	670 to 1,370	F3SG-4PGA□□□□-2C/4C

Note:1. Mounting brackets are not included. Order brackets sold separately.

Note:2. Connection cables are not included with the safety multi-light beam. Order cables sold separately.

Intelligent Tap

Used to configure the F3SG-SR/PG and connect external devices via IO-Link.

Appearance	Type	Model
	Intelligent Tap	F39-SGIT-IL3

Note:1. The cable to connect between the intelligent tap and IO-Link master unit is available.

For details, refer to F3SG-SR/PG Series Catalog (No. F105).

Note:1. Please contact your OMRON sales representative regarding the IO-Link setup file (IODD file).

Overview of IO-Link Compliant Devices

IO-Link Master Unit

IP67 Remote Terminal NXR-series EtherNet/IP™ IO-Link Master Unit

NXR-ILM08C-EIT

EtherNet/IP™

Streamline commissioning and maintenance of production equipment Simple, easy, and quick-Reduce Availability Loss and Quality Loss!

- I/O cable and communication cable diagnostics.
  Detects short circuits in I/O cables.
  Reports approximate locations of disconnections or short circuits in Ethernet cables.
- Replacement without software.
- Visualization of communication quality.
  Counts IO-Link and Ethernet communication errors.
- Built-in L2 switching hub for through-wiring for Ethernet.
- LED indicator:Superior visibility by color universal design.

Name	Number of IO-Link ports	Degree of protection	Port connection	Model
EtherNet/IP IO-Link Master Unit	8	IP67	M12 connector (A-cording, female)	NXR-ILM08C-EIT

For details, refer to NXR Series Catalog (No. R202).

IO-Link I/O Hub

IP67 Remote Terminal NXR-series IO-Link I/O Hub

NXR-☐D166C-IL2

Reduced wiring system with IO-Link

- Simple wiring via IO-Link master.
- Condition monitoring of machines.
  Detects disconnections and short circuits in I/O cables.
  Measures voltage of power supplied to units.
- LED indicator:Superior visibility by color universal design.

Name	Number of I/O ports	Number of inputs/outputs	Degree of protection	Port connection	Model
IO-Link I/O Hub	8	16 digital inputs	IP67	M12 connector (A-cording, female)	NXR-ID166C-IL2
		16 digital inputs/outputs			NXR-CD166C-IL2

For details, refer to NXR Series Catalog (No. R202).

IO-Link Master Unit

NX-series IO-Link Master Unit

NX-ILM400

IO-Link makes sensor level information visible and solves the three major issues at manufacturing sites! The screwless clamping terminal block reduces wiring work.

EtherNet/IP
EtherCAT.

- Downtime can be reduced. Notifies you of faulty parts and such phenomena in the Sensor in real time.
- The frequency of sudden failure can be decreased.
  Condition monitoring of sensors and equipment to prevent troubles.
- The efficiency of changeover can be improved.
  The batch check for individual sensor IDs significantly decreases commissioning time.

Product Name	Number of IO-Link ports	I/O refreshing method	I/O connection terminals	Model
NX-series IO-Link Master Unit	4	Free-Run refreshing	Screwless clamping terminal block	NX-ILM400

For details, refer to NX-ILM400 Data sheet.

GX-series IO-Link Master Unit

GX-ILM08C

IO-Link makes sensor level information visible and solves the three major issues at manufacturing sites! The unit for M12 Smartclick connector can be used in watery, and dusty environments.

EtherCAT.

- Downtime can be reduced. Notifies you of faulty parts and such phenomena in the Sensor in real time.
- The frequency of sudden failure can be decreased.
  Condition monitoring of sensors and equipment to prevent troubles.
- The efficiency of changeover can be improved.
  The batch check for individual sensor IDs significantly decreases commissioning time.

Product Name	Number of IO-Link ports	Environmental resistance	I/O connection terminals	Model
GX-series IO-Link Master Unit	8	IP67	M12 connector (A-cording, female)	GX-ILM08C

For details, refer to GX Series Data sheet.

Software

Product Name	Model
Sysmac Studio *1	SYSMAC-SE2□□□

*1. CX-ConfiguratorFDT for IO-Link sensor setup is included in Sysmac Studio.
For details, refer to Sysmac Studio Ver.1.□□ Data sheet.

Note:1. Please contact your OMRON sales representative regarding the IO-Link setup file (IODD file).

Note: Do not use this document to operate the Unit.
