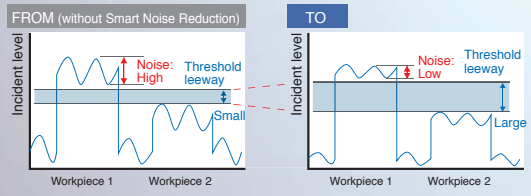
Signal-to-Noise Ratio Improved 2.5 Times

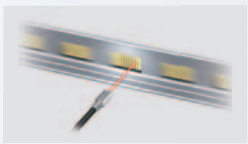
The influences of noise are reduced to achieve stable incident light levels by increasing the number of samples taken. This increases the margin for threshold values to achieve stable detection.



Point

Response Time of 30 μs in High-speed Mode*5

You can adjust the light intensity to detect fast-moving workpieces more accurately.*2



*1. For performance (sensing distance and minimum sensing object) based on November 2013 OMRON investigation. *2. Compared with E3X-HD.
*3. Infrared models (E3NX-FAH) are not equipped with GIGA RAY2S. *4. Compared with E3X-HD for normal operation processing. *5. Model with 1 output: 30 μs, model with 2 outputs: 32 μs.

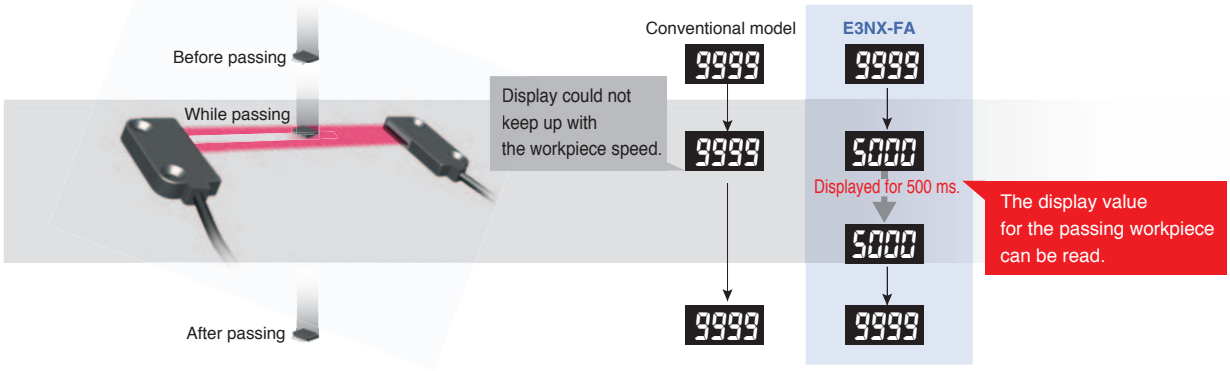
You can confirm changes in displayed values for fast workpieces to accurately set the threshold.



Point

Advanced DPC (Dynamic Power Control) PAT

Predictive Maintenance to Reduce Downtime

An alarm output* has been added to the DPC that automatically compensates differences in the incident level. A maintenance signal is output when the incident level drops due to dirt or vibration for use in predictive maintenance. (We recommend DPC for through-beam or retro-reflective models.)

*An alarm output is supported only on models with two outputs.

Models with Wire-saving Connectors Popular

No Master/Slave Distinctions in Amplifier Units

- **Reduce model numbers in stock**
  You do not need to stock both master and slave amplifier units.
- **Greatly reduced wiring work**
  Power is supplied from the Master Connector. Slave Connectors have only output lines.
- **Expansion is easy and reliable**
  Mutual interference prevention works even if you use a Master Connector instead of a Slave Connector or combine them with pre-wired models.

E3NW Cat.No.E428

Model for Sensor Communications Unit (With wired output) NEW

Offers Both Network Communications and High-speed Response

- **Communications model with a wired output**
  Network communications can be used for an application that requires a high-speed response.
- **Greatly reduced wiring work**
  Power is supplied from the E3NW Sensor Communications Units.
