

OMRON

Proximity Sensor with All-stainless Housing
E2EF

A Metal Head That's
Highly Durable*
and Provides
Long-distance Detection

Standard Model
(Completely stainless-steel
housing)

Spatter-resistant Model
(Completely stainless-steel housing
with Fluororesin Coating)

Long-distance
detection of **7 mm**
(M18 Model)

*More than 20 times the durability of Proximity Sensors with Resin Heads.

NEW

realizing

The Problem with Resin Heads

A resin head presents the risk of being damaged due to friction when the sensing surface comes in contact with a warped workpiece when confirming mounting status while the workpiece is moved between processes.

**Solved
by the
E2EF!**

Standard Model
(Completely stainless-steel housing)

Long-distance Detection*¹ Equivalent to or Greater Than Proximity Sensors with Resin Heads

Installation is possible at the same distance as Proximity Sensors with Resin Heads.

The metal heads of the E2EF achieve the same distances for the same sizes as the E2E Proximity Sensors with Resin Heads. This allows you to use Proximity Sensors that withstand friction with the workpiece without major changes to mounting brackets.

*1: The actual sensing distance will vary with the size or material of the object.
For details, refer to Engineering Data.

More than 20 times*² the durability of Proximity Sensors with Resin Heads.

Thick Metal Head That Resists Friction with the Workpiece

The 0.4-mm*³ metal head exhibits almost no wear due to friction with the workpiece or cleaning with metal brushes. This helps prevent equipment down time due to sensor failure and reduces the frequency of replacement.

*2: Stainless-steel brush test with M12 model.

*3: For M12 model.

Head thickness
0.4 mm
*3

Brush Test*

	Initial state	After 10 min.	After 200 min.
E2E (Proximity Sensors with Resin Heads)			
E2EF (Proximity Sensors with Metal Heads)			

Insulation destroyed in 10 min.

Insulation not destroyed after 200 min.

*Test results for stainless-steel brush rotating at 130 rpm.

Withstands Harsh Environments with Long-distance Detection and Resistance to Wear.

Reduce the replacement frequency due to damage from friction with the workpiece, prevent equipment down time for sensor failure, and reduce maintenance management costs.

Splatter-resistant Model
(Completely stainless-steel housing with Fluororesin Coating)

For Harsh Environments with High Risk of Workpiece Collision:

A Tough Metal Head That Resists Wear and Strikes

Head
thickness
0.8 mm
*4

Proximity Sensor
with All-stainless Housing

E2FM

A datasheet is available
(Cat. No. D103-E1-02).

*4:For M12 model.

CE C_{UL} US
LISTED

(UL is not applicable to all models.)

Stable Detection in Harsh Environments with Splatter Resistance and Durability

Splatter-resistant models with fluororesin-coated head are also available. Reduces adhesion of spatter to achieve stable detection. The tough all-stainless steel housing with a flame-retardant cable enables reliable application where spatter is present near welding machines.

Reduced Cleaning Frequency with Splatter Countermeasures

The splatter countermeasures reduce the risk of malfunction due to the buildup of metal debris or spatter. Frequent cleaning with metal brushes is not required.

Safety Precautions

WARNING

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

Never use this product with an AC power supply. Otherwise, explosion may result.

Precautions for Safe Use

The following precautions must be observed to ensure safe operation.

1. Do not use the Sensor in an environment where inflammable or explosive gas is present.
2. Do not attempt to disassemble, repair, or modify any Sensors.
3. Power Supply Voltage
Do not use a voltage that exceeds the rated operating voltage range. Applying a voltage that is higher than the operating voltage range may result in explosion or fire.
4. Incorrect Wiring
Be sure that the power supply polarity and other wiring is correct. Incorrect wiring may cause explosion or fire.
5. Connection without a Load
If the power supply is connected directly without a load, the internal elements may explode or burn. Be sure to insert a load when connecting the power supply.

Precautions for Correct Use

Do not use the Sensor under ambient conditions that exceed the ratings.

1. Do not use the Sensor in the following locations.
 - (1) Outdoor locations directly subject to sunlight, rain, snow, or water droplets
 - (2) Locations subject to atmospheres with chemical vapors, in particular solvents and acids
 - (3) Locations subject to corrosive gas
2. The Sensor may malfunction if used near ultrasonic cleaning equipment, high-frequency equipment, transceivers, cellular phones, inverters, or other devices that generate a high-frequency electric field. Refer to the OMRON website (www.ia.omron.com/) for typical measures.
3. Laying the Sensor wiring in the same conduit or duct as high-voltage wires or power lines may result in incorrect operation and damage due to induction. Wire the Sensor using a separate conduit or independent conduit.
4. Cleaning
Never use thinner or other solvents. Otherwise, the Sensor surface may be dissolved.

Design

Influence of Surrounding Metal

When the Proximity Sensor is embedded in metal, make sure that the clearances given in the following table are maintained. The values depend on the type of nuts used for mounting. Be sure to use the supplied nuts (SUS303).

(Unit: mm)

Model	Item Embedding material	l	d	D	m	n
E2EF-(Q)X2D1	Iron	0	8	0	8	30
	Aluminum	10	50	10	8	50
E2EF-(Q)X3D1	Iron	0	12	0	12	40
	Aluminum	16	70	16	12	70
E2EF-(Q)X7D1	Iron	0	18	0	28	60
	Aluminum	16	80	16	28	80
E2EF-(Q)X12D1	Iron	0	30	0	48	100
	Aluminum	24	120	24	48	120

Note: The influence from other non-magnetic surrounding metals is nearly the same as that from aluminum.

Mutual Interference

When installing two or more Sensors face-to-face or side-by-side, ensure that the minimum distances given in the following table are maintained.

(Unit: mm)

Model	Item	A	B
E2EF-(Q)X2D1		35	35
E2EF-(Q)X3D1		40	35
E2EF-(Q)X7D1		65	60
E2EF-(Q)X12D1		110	100

Chips from Cutting Aluminum

Normally, chips from cutting aluminum will not cause a detection signal to be output even if it adheres to or accumulates on the detection surface. In the following cases, however, a detection signal may be output. Remove the cutting chips in these cases.

1. If $d \geq \frac{2}{3} D$ at the center of the detection surface where d is the cutting chip size and D is the detection surface size

(Unit: mm)

Model	Dimension	D
E2EF-(Q)X2D1		6
E2EF-(Q)X3D1		10
E2EF-(Q)X7D1		16
E2EF-(Q)X12D1		28

2. If the cutting chips are pressed down

Mounting

Do not tighten the nut with excessive force. A washer must be used with the nut. Do not use tightening force that exceeds the values in the following table.

Model	Torque
E2EF-(Q)X2D1	9 N·m
E2EF-(Q)X3D1	30 N·m
E2EF-(Q)X7D1	70 N·m
E2EF-(Q)X12D1	180 N·m
